

PRATEEK GUPTA

Associate DevOps Engineer | Multi-Cloud (Azure/AWS) | DevSecOps

sre.prateek@gmail.com | +91-9580991574 | Greater Noida, India

Portfolio | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Associate DevOps Engineer with hands-on, multi-cloud experience across Azure and AWS, specializing in Infrastructure as Code (Terraform), Azure Landing Zone design, and DevSecOps-driven CI/CD pipelines. Skilled at translating business requirements into HLD/LLD for secure, scalable, cost-efficient network and cloud architectures. Proficient in Azure core networking (VNet peering, Hub-Spoke topology, ExpressRoute, VPN Gateway, Private Endpoints, Azure Firewall, Application Gateway, Load Balancer), infrastructure security scanning (tfsec, tflint, Checkov), and cost governance (Infracost, Azure Cost Management). Growing AWS proficiency.

TECHNICAL SKILLS

Cloud Platforms	Microsoft Azure (Compute, Storage, Networking, IAM) · AWS (EC2, S3, VPC, IAM) · Multi-Cloud Architecture
Azure Networking	VNet, Subnetting, VNet Peering, Hub-and-Spoke Topology, NSG, Azure Firewall, ExpressRoute, VPN Gateway, Private Endpoints, Application Gateway, Load Balancer, Azure DNS, Route Tables
Cloud Architecture	Azure Landing Zone (Hub-Spoke), HLD & LLD, Well-Architected Framework principles
IaC	Terraform (Modules, State, Workspaces, Remote Backend) — VNet, VM, NSG, Landing Zone provisioning
DevSecOps	tfsec, tflint, Checkov, Gitleaks, Infracost
CI/CD	GitHub Actions, Azure Pipelines, Blue-Green Deployments
Monitoring & Cost	Azure Monitor, Azure Cost Management, Infracost, OpenCost
Scripting	Python, Bash, PowerShell (infrastructure automation & network config scripting)
Version Control	Git, GitHub, Azure Repos
Operating Systems	Linux (Ubuntu), Windows

INTERNSHIP EXPERIENCE

Associate DevOps Engineer — DevOps Insiders

May 2026 – Present

India

- Designed and built an Azure Landing Zone using reusable parent-child Terraform modules with a Hub-and-Spoke network topology — hub/spoke VNets, VNet peering, centralized NSGs, and a remote Azure backend for state management.
- Deployed and managed diverse workloads on the Landing Zone, including monolithic applications, Virtual Machines, VM Scale Sets (VMSS), App Service & App Service Plans, and Kubernetes (AKS) based services.
- Automated runtime configuration and infrastructure provisioning using Linux, Bash, and PowerShell scripting integrated with Terraform (IaC), and provisioned core Azure resources (Resource Groups, Storage Accounts, VMs) via Azure CLI/Portal.
- Used Git and GitHub for version control, and managed work items, sprints, and backlogs using Azure Repos and Azure Boards.
- Implemented a CI/CD pipeline following a trunk-based development strategy and branching best practices, with a dedicated infrastructure pipeline enforcing DevSecOps scanning (tfsec, tflint, Checkov) before every merge — delivering an error-free, secure, and cost-efficient automated Landing Zone pipeline.
- Built secure file-sharing solutions using Azure Blob Storage with SAS Token-based access control, and monitored/optimized cloud costs using OpenCost, Infracost, and Azure Cost Management dashboards.

PROJECTS

Azure Landing Zone – Hub & Spoke Architecture

Terraform · Azure VNet Peering · NSG · Remote State Backend · HLD/LLD

- Authored HLD and LLD documentation for a production-style Azure Landing Zone, defining hub-spoke topology, IP addressing plan, and security boundaries.
- Built the Landing Zone end-to-end in Terraform with seven reusable child modules and nested map(object(...)) variables for scalable, multi-environment provisioning.
- Implemented hub-spoke VNet peering, centralized NSGs, and route tables to enforce segmented, least-privilege network access.
- Configured a remote Azure backend for Terraform state, enabling safe collaborative and repeatable deployments.

CI/CD Pipeline with Infrastructure as Code & DevSecOps

Azure Pipelines · Terraform · GitHub Actions · tfsec · Checkov · Infracost · Azure Monitor

- Designed and deployed a CI/CD pipeline on Azure integrating GitHub with Azure Pipelines for automated builds and deployments.
- Embedded DevSecOps gates (tfsec, tflint, Checkov for policy/security scanning and Infracost for cost estimation) directly into the pipeline before every apply.
- Automated application deployment to VM instances on every code push, reducing manual intervention, and used reusable Terraform modules to provision VNet, Subnets, NSGs, and VMs.
- Stored build artifacts in Azure Blob Storage and implemented a blue-green deployment strategy for zero-downtime releases; configured least-privilege Azure AD roles and Azure Monitor for centralized logging and alerting.

Azure Billing & Cost Management

Azure Cost Management · Azure Budgets · Infracost · Resource Tagging

- ◆ Analyzed cloud usage, service costs, and billing trends using Azure Cost Management dashboards to identify optimization opportunities.
- ◆ Configured Azure Budgets with alert rules to monitor spending and prevent cost overruns, and implemented resource tagging for accurate cost allocation.
- ◆ Identified unused/underutilized resources and recommended cost-saving actions using Azure Monitor and Infracost estimates.

EDUCATION

B.Tech – Computer Science & Engineering, Dr. A.P.J Abdul Kalam Technical University (AKTU) **2022 – 2026**

CGPA: 7.8

12th – PCM, UP Board **2021 · 76%**

10th – Mathematics, CBSE **2019 · 79.8%**

CERTIFICATIONS

- ◆ Data Structures & Algorithms Certification – Apna College
